Junhao Huang

PhD Student
BNU-HKBU United International College, Zhuhai, China
+86-18626423381
jhhuang_nuaa@126.com, huangjunhao@uic.edu.cn

Education

- **BNU-HKBU United International College** — Supervisor: Dr. Donglong Chen
  PhD student at Data Science and Technology — *Sep. 2021-now*
- **Nanjing University of Aeronautics and Astronautics** — Supervisor: Prof. Zhe Liu
  Master Degree of Cyberspace Security — *Sep. 2018-Jun. 2021*
- **Nanjing University of Aeronautics and Astronautics** — GPA: 3.7
  Bachelor Degree of Computer Science and Technology — *Sep. 2014-Jun. 2018*

Research Interest

- Cryptographic Engineering, Public-key Cryptography, Lattice-based Cryptography.

Research Activities

- **IACR CHES/TCHES 2024 Artifact Evaluation Committee** — Halifax, Canada
  International Association for Cryptologic Research (IACR) — *Oct. 2023-Oct. 2024*
- **Visiting Scholar, Electrical Engineering** — Hong Kong, China
  City University of Hong Kong, Prof. Ray C.C. Cheung — *Jul. 2023-Dec. 2023*
- **Teaching Assistant** — Zhuhai, China
  BNU-HKBU UIC, Operating Systems, Dr. Sunny Seon Phil JEONG — *Feb. 2023-Jun. 2023*
- **Teaching Assistant** — Zhuhai, China
  BNU-HKBU UIC, Computer and Network Security, Dr. Donglong Chen — *Sep. 2021-Dec. 2021*
- **Visiting Scholar, Cyberspace Security** — Whuhan, China
  Wuhan University, Cryptography and Blockchain Technology Lab — *Sep. 2019-Jan. 2020*

Publications

- Journal Publications

1. Yet another Improvement of Plantard Arithmetic for Faster Kyber on Low-end 32-bit IoT Devices,
   Junhao Huang, Haosong Zhao, Jipeng Zhang, Wangchen Dai, Lu Zhou, Çetin Kaya Koç, Ray C.C. Cheung, Donglong Chen.
   In https://arxiv.org/abs/2309.00440

2. Improved Plantard Arithmetic for Lattice-based Cryptography,
   Junhao Huang, Jipeng Zhang, Haosong Zhao, Zhe Liu, Ray C.C. Cheung, Çetin Kaya Koç, Donglong Chen.
   In IACR Transactions on Cryptographic Hardware and Embedded Systems, 2022 (**CCF-B**)
3. Time-memory Trade-offs for Saber on Memory-constrained RISC-V,
   Jipeng Zhang, **Junhao Huang**, Zhe Liu, Sujoy Sinha Roy.
   In IEEE Transactions on Computers, 2022 (**CCF-A**)
4. High-Speed AVX2 Implementation of AKCN-MLWE,
   YANG Hao, LIU Zhe, **HUANG Jun-Hao**, SHEN Shi-Yu ZHAO Yun-Lei.
   In Chinese Journal of Computers, 2021

- Conference Publications

1. Efficient Implementation of Kyber on Mobile Devices,
   Lirui Zhao, Jipeng Zhang, **Junhao Huang**, Zhe Liu, Gerhard Hancke,
   In IEEE International Conference on Parallel and Distributed Systems - ICPADS 2021 (**CCF-C**)
2. Parallel Implementation of SM2 Elliptic Curve on Intel Processor with AVX2.
   Junhao Huang, Zhe Liu, Zhi Hu, and Johann Groschdl.
   In Australasian Conference on Information Security and Privacy - ACISP 2020 (**CCF-C**)
3. An Efficient and Scalable Sparse Polynomial Multiplication Accelerator for LAC on FPGA,
   Jipeng Zhang, Zhe Liu, Hao Yang, **Junhao Huang**, Weibin Wu.
   In IEEE International Conference on Parallel and Distributed Systems - ICPADS 2020 (**CCF-C**)

Reaserch Experiences

- Sep. 2022-Mar. 2023, Yet another Improvement of Plantard Arithmetic for Faster Kyber on Low-end 32-bit IoT Devices
  - Further extend the input range of the improved Plantard arithmetic tailored for Kyber.
  - Efficient NTT/INTT implementation on Cortex-M3 and RISC-V.
  - Speed-ups for Kyber on Cortex-M3 and RISC-V.
- Sep. 2021-Apr. 2022, Improved Plantard Arithmetic for Lattice-based Cryptography
  - Present an improved Plantard arithmetic tailored for LBC.
  - Obtained speed-ups for Kyber and NTTRU with 16-bit NTT on Cortex-M4.
  - The source code has been merged into pqm4, PR#244 (merged at 25th, Oct, 2022).
- Dec. 2020-Apr. 2021, Memory Efficient Implementation of Saber on RISC-V
  - Reduce the memory usage of Saber by using a **just-in-time** public matrix, secret, and noise generation technique.
  - Represent the secret, and noise with a new **smaller data-type**, which reduces the size of the secret and noise.
- Apr. 2019-Nov. 2020, Accelerating ECC utilizing the Double Precision Floating-point Number on GPU
  - Implement the prime field arithmetic for the prime modulus $p = 2^n - \delta$ by combining the computing power of **the fused multiply-add instruction of double-precision floating-point number** and the addition, subtraction, and shift instructions of integer number.

  - Propose how to perform multi-precision multiplication over unreduced-form big number, which optimizes the point multiplication, especially Montgomery ladder algorithm for Montgomery curves, with the **lazy reduction technique**.

- Apr. 2019-Oct. 2019, Parallel Implementation of SM2 Elliptic Curve with AVX2
  - Utilize SIMD AVX2 instruction set to implement 2-way SM2 prime field operations.
  - Reschedule the (X,Y)-only Co-Z Jacobian arithmetic and perform the symmetric operations using the 2-way prime field operations
  - Implement the Co-Z based Montgomery ladder algorithm based on the parallel Co-Z Jacobian arithmetic.
  - The number of the 2-way prime field operations of the Co-Z Jacobian arithmetic is reduced to a half compared to the sequential implementation.
  - The AVX2 version Co-Z based Montgomery ladder algorithm is **1.31** times faster than the X64 assembly implementation.

Honor Certificates

- May. 2023 Third prize for the Guangdong Province Cyberspace Security Outstanding Paper Award, GDCA.
- Apr. 2023 Best RPG Poster Award of Faculty of Science & Technology, BNU-HKBU UIC.
- Nov. 2019 Patent for An efficient implementation of Co-Z based Montgomery ladder algorithm using AVX2, CN112367172A.
- Oct. 2018 Postgraduate **First prize** Scholarship
- Oct. 2018 **First Prize** of Academic Scholarship
- Jun. 2018 Software Copyright for the University Association Information Management System
- Oct. 2017 National Encouragement Scholarship, **Third Prize** of Outstanding Student Scholarship
- Oct. 2016 National Encouragement Scholarship, **Second Prize** of Outstanding Student Scholarship
- Oct. 2015 National Encouragement Scholarship, **First Prize** of Outstanding Student Scholarship

Professional Skills

1. Language Level: CET-4: 597, CET-6: 513, IELTS: 7.0
2. Programming Language: C/C++, x86-64/Cortex-M4/Cortex-M3/RISC-V Assembly, AVX2 and CUDA programming, Python
